SUMMARY

Cloud Engineer with experience in designing, deploying, and maintaining cloud-native applications and data processing systems on Google Cloud Platform (GCP). Skilled in Infrastructure as Code (Terraform), containerization (Docker), CI/CD automation, serverless architectures, and scalable backend services. Strong foundation in cloud architecture, distributed systems, automation, and performance optimization.

EDUCATION

Vellore Institute of Technology Vellore, TN, IND
B.Tech - Computer Science and Engineering, 7.44/10 CGPA *July 2020 - June 2024*

EXPERIENCE

Tata Consultancy Service - System Engineer Aug 2024-Dec 2025
Finance

- Developed and enhanced **backend data** processing modules using **PL/SQL and .NET,** supporting financial systems handling **100K+ records per day.**
- Optimized **complex SQL queries, stored procedures, and batch workflows,** reducing execution time by **25–35%.**
- Contributed to **end-to-end feature enhancements** across **3+ data products**, from requirement analysis to deployment.
- Built reusable validation and transformation logic, reducing **data inconsistencies by ~30%**.
- Collaborated with **5+ cross-functional stakeholders** (business, QA, frontend) to deliver scalable solutions.
- Resolved **15+ production issues**, performing root cause analysis and implementing long-term fixes.
- Improved system observability by introducing logging and validation checks, reducing debugging time by **20%**.

Bhabha Atomic Research Center - Software Developer Intern May 2023 - July 2023
Web service

- Designed and implemented a **normalized relational database schema** to manage structured employee data efficiently.
- Developed **RESTful backend services using Spring Boot**, enabling seamless data exchange between frontend and backend systems.
- Implemented business logic for data validation, retrieval, and transformation across multiple modules.
- Optimized database queries and indexing strategies to improve **data retrieval performance**.
- Participated in designing modular service architecture for better scalability and maintainability.

PROJECTS

Cloud-Native File Storage & Sharing System |
GCP (Cloud Run, Cloud Storage, Cloud Functions), Node.js, Firestore, Docker, CI/CD

- Built and **deployed a scalable file storage platform on Google Cloud Platform** supporting **10K+ uploads**.
- Developed **serverless event-driven workflows using Cloud Functions and Cloud Storage triggers**.
- Hosted **backend services on Cloud Run** with automatic scaling and high availability.
- Implemented **CI/CD pipelines using GitHub** Actions for automated testing and deployment.
- Applied access control and security best practices for secure file management.
- Optimized application performance through caching and efficient cloud resource utilization.

Cloud Workflow Orchestration Platform |
Python, Apache Airflow, Docker

- **Designed and deployed workflow orchestration pipelines using Apache Airflow.**
- Automated **batch processing workflows with scheduling, retries, and dependency management**.
- **Containerized workflow components using Docker** for portability and consistency.

- Implemented **centralized logging and monitoring** for operational visibility.
- Improved reliability through **automated recovery and failure handling mechanisms**.
- **Reduced manual operational effort through end-to-end workflow automation**.

Scalable Event Processing System |

Java, PostgreSQL, Redis, Apache Kafka

- Built a **distributed event-processing platform capable of handling 100K+ events per day.**
- Developed **streaming workflows using Apache Kafka** for real-time data ingestion.
- Implemented **Redis caching to improve performance and reduce response latency.**
- Designed **scalable PostgreSQL schemas for high-volume transactional workloads**.
- Evaluated **system scalability and fault tolerance through simulated production workloads.**
- Developed **REST APIs to expose processed data and system metrics**.

TECHNICAL SKILLS AND COMPETENCIES

Programming Languages: Python, Java, SQL, JavaScript, Shell Scripting
Cloud Platforms: Google Cloud Platform (GCP), Cloud Run, Cloud Storage, Cloud Functions, Google Kubernetes Engine (GKE), Pub/Sub
Infrastructure & DevOps: Terraform, Docker, Kubernetes, CI/CD, GitHub Actions, Infrastructure as Code (IaC)
Operating Systems: Linux
Cloud Architecture: Serverless Computing, Cloud-Native Applications, Event-Driven Architecture, Microservices
Databases: PostgreSQL, MySQL, Oracle, Firestore
Data & Workflow Tools: Apache Airflow, Apache Kafka, Redis
Monitoring & Observability: Cloud Monitoring, Prometheus, Grafana, Logging, Monitoring, Troubleshooting
Networking: Networking Fundamentals, HTTP/HTTPS, Load Balancing, DNS, TCP/IP
Core Concepts: Distributed Systems, System Design, Scalability, High Availability, Reliability Engineering, Performance Optimization, Automation
