SUMMARY

Data Engineer with experience in building scalable data pipelines, optimizing SQL workflows, and developing data-intensive applications. Skilled in ETL development, database optimization, workflow orchestration, and cloud-based data processing. Hands-on experience with Python, SQL, Apache Airflow, GCP, and CI/CD automation, with a strong foundation in data modeling, distributed systems, and analytics engineering.

EDUCATION

Vellore Institute of Technology

B.Tech - Computer Science and Engineering, 7.44/10 CGPA

Vellore, TN, IND

July 2020 - June 2024

EXPERIENCE

Tata Consultancy Service - System Engineer

Aug 2024-Dec 2025

Finance

- Developed and enhanced **backend data** processing modules using **PL/SQL and .NET**, supporting financial systems handling **100K+ records per day**.
- Optimized **complex SQL queries, stored procedures, and batch workflows**, reducing execution time by **25-35%**.
- Contributed to **end-to-end feature enhancements** across **3+ data products**, from requirement analysis to deployment.
- Built reusable validation and transformation logic, reducing **data inconsistencies by ~30%**.
- Collaborated with **5+ cross-functional stakeholders** (business, QA, frontend) to deliver scalable solutions.
- Resolved **15+ production issues**, performing root cause analysis and implementing long-term fixes.
- Improved system observability by introducing logging and validation checks, reducing debugging time by **20%**.

Bhabha Atomic Research Center - Software Developer Intern

May 2023 - July 2023

Web service

- Designed and implemented a **normalized relational database schema** to manage structured employee data efficiently.
- Developed **RESTful backend services using Spring Boot**, enabling seamless data exchange between frontend and backend systems.
- Implemented business logic for data validation, retrieval, and transformation across multiple modules.
- Optimized database queries and indexing strategies to improve **data retrieval performance**.
- Participated in designing modular service architecture for better scalability and maintainability.

PROJECTS

Data Pipeline Orchestration Platform |

Python, Apache Airflow, Docker

- Built automated ETL pipelines** for data ingestion, transformation, and validation workflows.
- Designed **DAG-based orchestration** with dependency management, retries, and failure recovery.
- Automated **batch processing jobs**, reducing manual intervention and improving reliability.
- Implemented **centralized logging and monitoring** for pipeline observability.
- Containerized pipeline components using Docker** for reproducible execution.
- Developed **modular workflows supporting scalable data processing** operations.

Cloud-Native Data Processing Platform |

GCP (Cloud Run, Cloud Storage, Cloud Functions), Node.js, Firestore, CI/CD

- Built a scalable **cloud-based data processing system handling 10K+ records** and file uploads.
- Designed **event-driven workflows using Cloud Functions** for automated processing.

- **Deployed services on Cloud Run** with auto-scaling capabilities.
- **Implemented CI/CD pipelines using GitHub Actions** for automated deployments.
- Improved system performance through **caching and optimized storage access patterns**.
- **Applied access control and security** best practices for data protection.

Recommendation Analytics Pipeline | *Python, PostgreSQL, FastAPI, MLflow, Docker*

- **Built end-to-end data pipelines** for collecting, transforming, and serving recommendation data.
- Performed feature engineering and data preprocessing on user interaction datasets.
- Designed modular workflows covering ingestion, validation, training, and deployment stages.
- Implemented **experiment tracking and model versioning using MLflow**.
- Stored and managed analytical datasets in **PostgreSQL** for reproducibility and reporting.
- Automated deployment workflows using **Docker and CI/CD pipelines**.

TECHNICAL SKILLS AND COMPETENCIES

Programming Languages: Python, SQL, Java, JavaScript

Data Engineering: ETL/ELT Pipelines, Data Modeling, Data Validation, Data Transformation, Workflow Orchestration, Batch Processing, Data Quality Management

Databases & Data Warehousing: Oracle, PostgreSQL, MySQL, Firestore, BigQuery

Big Data & Streaming: Apache Airflow, Apache Kafka

Cloud & DevOps: Google Cloud Platform (Cloud Run, Cloud Storage, Cloud Functions), Docker, Terraform, CI/CD, GitHub Actions

Data Science & Analytics: Pandas, NumPy, Feature Engineering, Data Analysis

Core Concepts: Database Optimization, Distributed Systems, Data Structures & Algorithms, System Design, Performance Optimization
